

Promotion of the HashSign and HashTag solution in Virtual Booth

Our blockchain based one-stop deal closing platform, HashSign and HashTag, suits all industrial sectors that emphasize unchangeable and traceable historical records, especially the copyright industry.

All business can complete entire deal-closing lifecycle within HashSign: With our template library offering over 100 smart contract legal templates crafted by legal experts for all sectors, including Human Resources, Finance, Sales and Purchase, etc.; HashSign supports contract lifecycle management from contract drafting, send completed contracts to initiate e-signing invitation to multiple parties, and verify signed documents on blockchain to form an immutable evidence chain, while greatly reduce the legal expenses and time for contract drafting.

With the latest IP registration and trading module, HashSign could register IP copyright with accurate KYC registration flow, including facial record, photo record and password, and provides fair distribution of revenue between IP creator and buyers by smart contract, royalty fee, to empower the Copyright industry.

On the other hand, HashTag could ensure the transparency of IP trading by generating a unique ID to track every IP sales order and transaction, which allows all parties to monitor the progress and assets of the project with ID interactions and operations.

By storing all the data in our blockchain, users could review the comprehensive historical records regarding identity verification, e-signature and transaction time with our patented 3D Timeline Rollback Mechanism, users could provide an evidence chain to relevant authorities whenever they encounter any dispute or infringement. While users could easily track the ownership updates or the renewals of copyrights, it also facilitates the operation of version control for all type of documents and data.

Our HashSign and HashTag platform is also open for API integration with the existing operation system in your company.
