

Responsible Business Communication

LeapXpert's enterprise-grade platform gives organizations peace of mind by creating an accessible digital record of all business communications conducted over mobile messaging applications.

Gain full ownership of all your business communications - anytime, anywhere, from any platform

As the risks of slipping out of compliance and losing ownership over critical data grow, LeapXpert provides companies with real-time visibility and total control over their internal and client-facing business conversations.

LeapXpert's platform, which integrates directly into **Microsoft Teams** or **Slack**, creates a comprehensive digital record of company conversations across all text and instant messaging communication channels, such as **iMessage, WhatsApp, SMS, LINE, Signal, Telegram, and WeChat.**

FMOP™ - Federated Messaging Orchestration Platform

LeapXpert FMOP™ enables employees to interact with clients on any consumer messaging application, while enabling enterprises to monitor, archive, and govern business-related correspondence, and ensure full regulatory compliance.

The platform enables rich communication flows between employees and clients, including individual and group chats, across different channels and message types, from a single, centralized platform – the LeapXpert enterprise mobile and desktop apps, or existing enterprise collaboration applications such as Microsoft Teams, Slack, and WeCom.

The platform integrates natively with leading consumer messaging platforms, following the official guidelines defined by each platform, while an open API-based architecture enables easy integration with enterprise systems, applications, and processes such as archiving, security, monitoring and surveillance, CRM, and enterprise productivity and collaboration tools.
