

Smart line is to address the imbalance usage rate of the three cross-harbour tunnels in a visual way. Showing car owners an interactive map made by analyzing the traffic flow near the tunnel, and predict the time they will arrive at their destination, encouraging them to use a more time-saving route.

First, user choose their departure location and destination. Then, Smart line shows the forecast time users will arrive at their destination. Therefore, we can encourage users to consider not only the price but also the time cost. Thus, we can address the imbalance usage rate of the three cross-harbour tunnels.
