Empowering sustainability for a better world and sustainable business

Vision

Empowering sustainability for a better world and sustainable business

Mission

We drive sustainability for customers with a data-driven waste management approach. By integrating sustainability in every process of reversed supply chain management, our customers can make positive impacts to the society and environment, and higher business return.

Solutions

- IT Asset Disposition
- Sustainable Reverse Supply Chain
- Waste Management Solutions
- Waste Analytics
- Environment System Integration

Branding

"Recycle E" is our registered trademark. Our brand promise is to make recycling easier.

SYSTEM

With years of experience, EcoSage has optimized our diversified asset processing business by process systemization and standardization. We have even integrated sustainability and information security requirements into our operating system. Therefore, we have won the customer trust with leading management, advanced equipment, and quality service.

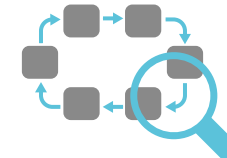

Enquiry

Our global customer service team enabling us to provide standardized asset disposal services across different countries.

Assessment

Our expert team assesses the customer's security requirements and local environmental concerns and formulate a service plan that meets the concept of sustainable development for the customer.

Chain of Custody

With an auditable chain of custody, traceable documents are provided for each step of process to satisfy auditing requirements.

Collection

Our global logistics fleet and professional staff ensure that assets meet security standards during the collection process.

Inventory Management

After the assets arrived at our monitored processing facilities, we assign a tracking barcode to each of the asset, and the related information are recorded into our inventory management system in order to allow real-time tracking to our customers.

Certificates

After the service is completed, our customer receives an electronic certificate as a proof on service completion in compliance with ISO27001 and ISO14001 standards and fulfils the requirements by laws and regulations on the service area, in order to facilitate auditing for the customer.

Report

Our unique and transparent service reports not only include all traceable details on the process, but also show the customer's sustainability performance.

Recycling and Disposal

When dealing with materials which lack of market value, we consider recycling and upcycling first. "Landfilling" is always the last resort.

Value-added Services

Value-added services can be arranged to maximize the value of assets such as reselling, repairing, refurbishment, reconfiguration, donations and disassembling to valuable parts.

Classification

According to customer requirements, quality of items and demand on the market, assets are tested, classified, and then carry out different processing procedures accordingly.

Data Destruction

With a variety of destruction methods, sensitive information such as data, Personally identifiable information (PIIs), brand elements and intellectual properties (IPs) inside or outside the assets are destroyed completely.

▶ IT Asset Disposition Services

Safe and secure IT asset disposition is essential for protecting sensitive information of your company as well as the personal identifiable information of your valuable customers. EcoSage offers tailor-made IT asset disposition solutions to ensure they are disposed properly and fulfilled with compliance, security, and sustainability.

• Data Destruction

We provide on-site or off-site services, covering various data wiping and storage media destruction tasks.

• Chain of Custody

Ensure that all assets are traceable and properly handled in every step. Our online inventory management system allows customers to retrieve relevant photos and document evidences at any time to ensure compliance with customer security policy requirements.

• Decommissioning & Asset Removal

Our professional technicians provide on-site hardware disassembly, decommissioning and inventory audits for customers' offices or data centers.

• Repairing, Refurbishment and Remarketing

Assets that have residual market value are tested, graded and refurbished for resale, and their values will recover a portion of your disposition cost. EcoSage helps in reselling functional assets via a variety of retail, direct and wholesale channels for maximum value recovery.

• Environmental Process

We handle assets with no market value for customers. Our processing procedures comply with relevant local and international regulations for e-waste processing, and are certified to the highest environmental standards.

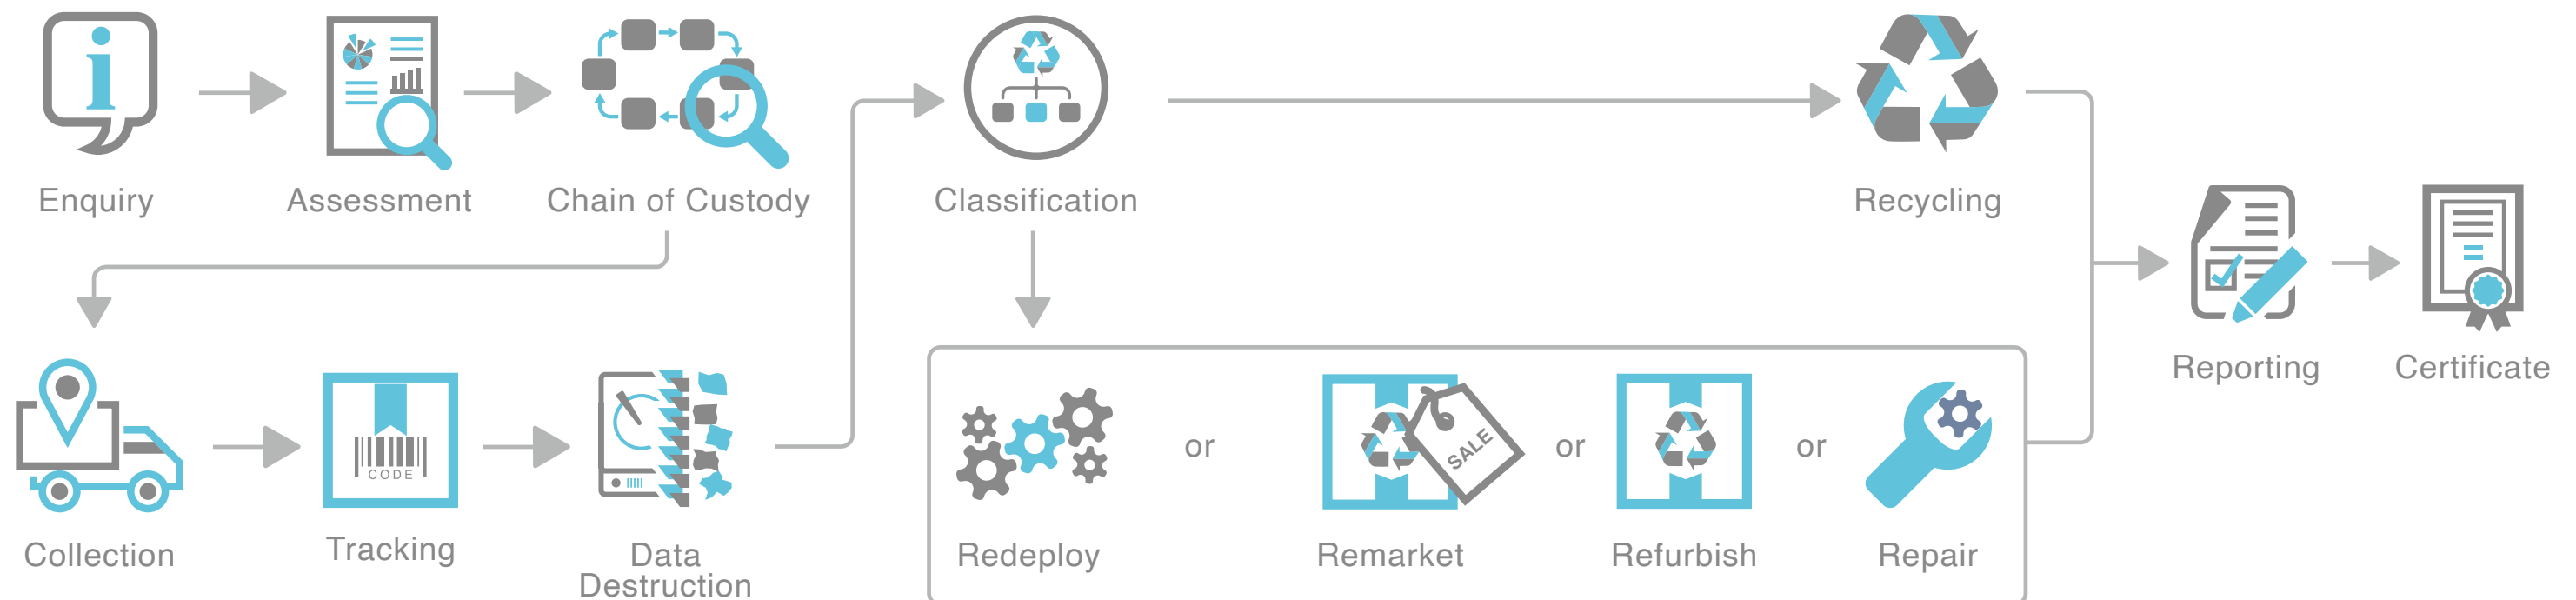

• Sustainability

Sustainability is essential to EcoSage's IT asset disposition services. Rather than directly disposing of materials generated during the destruction process, we prioritize in recycling and upcycling to create conditions for sustainable development.

• Industry Solutions

With years of experience and continuous investment in upgrading our software and hardware, we are leading in handling waste electronic products to bring environmental and economic benefits to the public. No matter what industry you are in, our experts are always available for you.

▶ Recycling Solutions

► Data Destruction

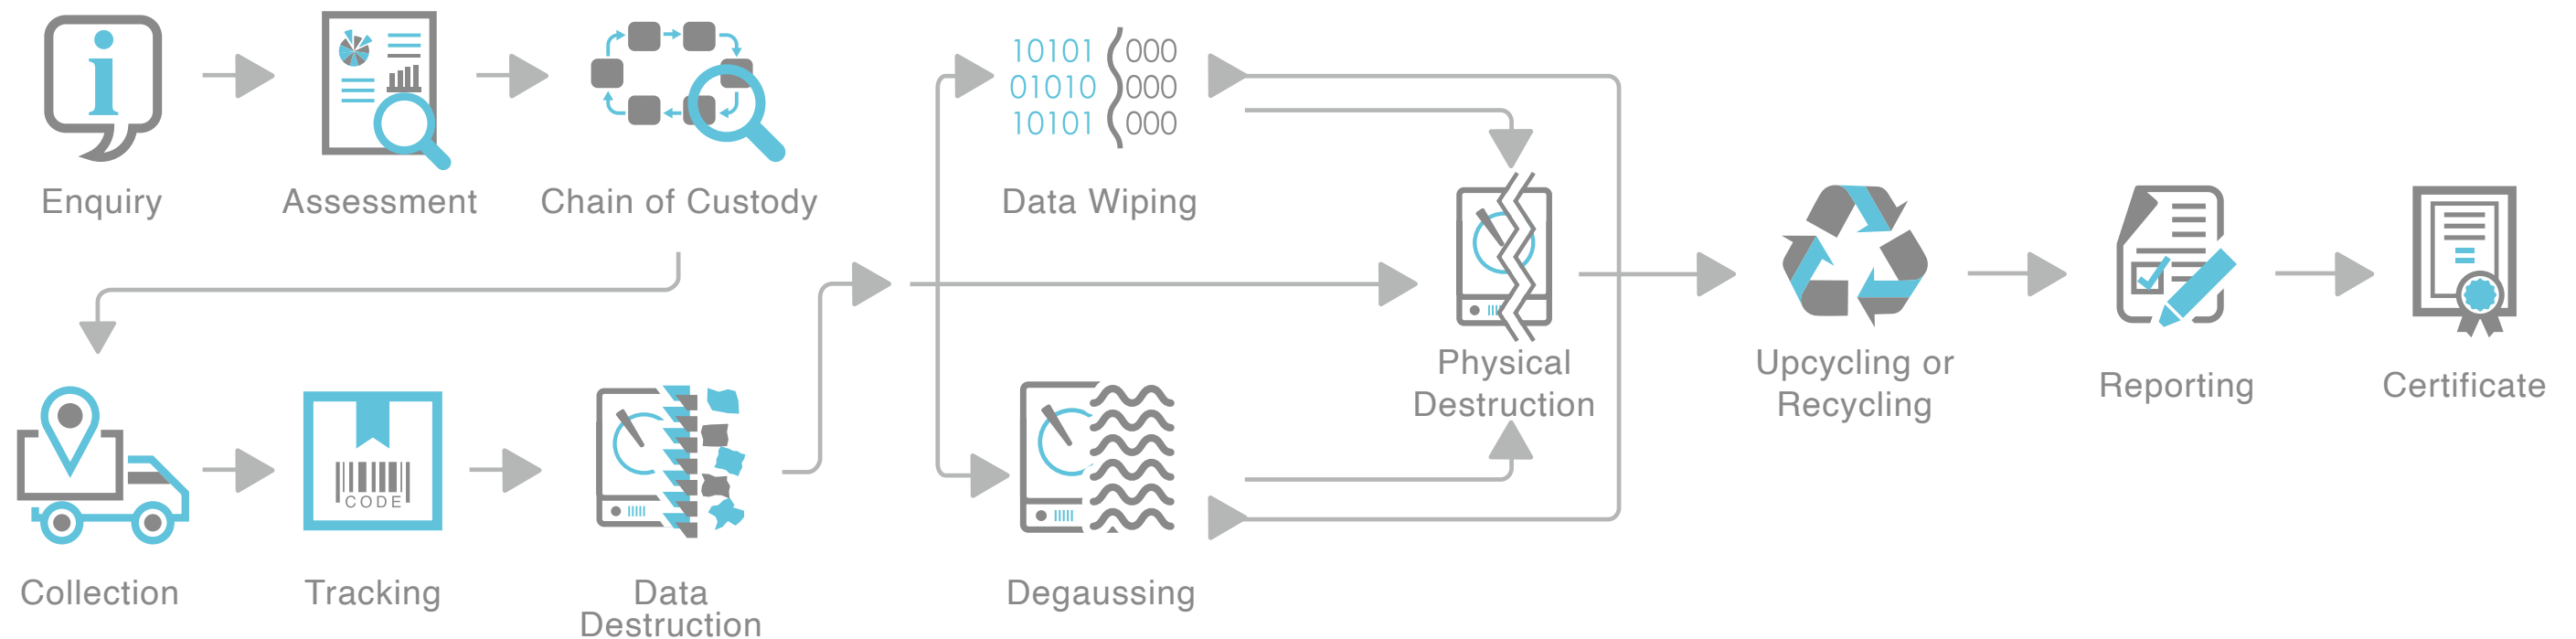

Information security is vital to the success of an enterprise, but sensitive information may be leaked during improper processing of old IT equipment, which not only damages reputation, and even causes huge losses to the company.

With years of experience in information security management, EcoSage understands the importance of correctly handling data for security and legal requirements. We securely collect, destroy, wipe and even shred all kinds of equipment containing important information, including hard drives, flash storage, memory cards and laptops.

As a provider of secure data destruction services in Hong Kong and APAC regions, EcoSage is recognized by the highest standards. We have various government licenses, certificates and awards that meet the highest standards available for data destruction services. Customers can rely on us for responsible data destruction services.

► Solutions

► Sustainable Reverse Supply Chain Management

With years of waste management experience and wisdom, EcoSage help customers reduce expenses, time, inventories and eliminate inefficiencies, so as to achieve sustainable reverse supply chain management in order to increase profits and protect the environment.

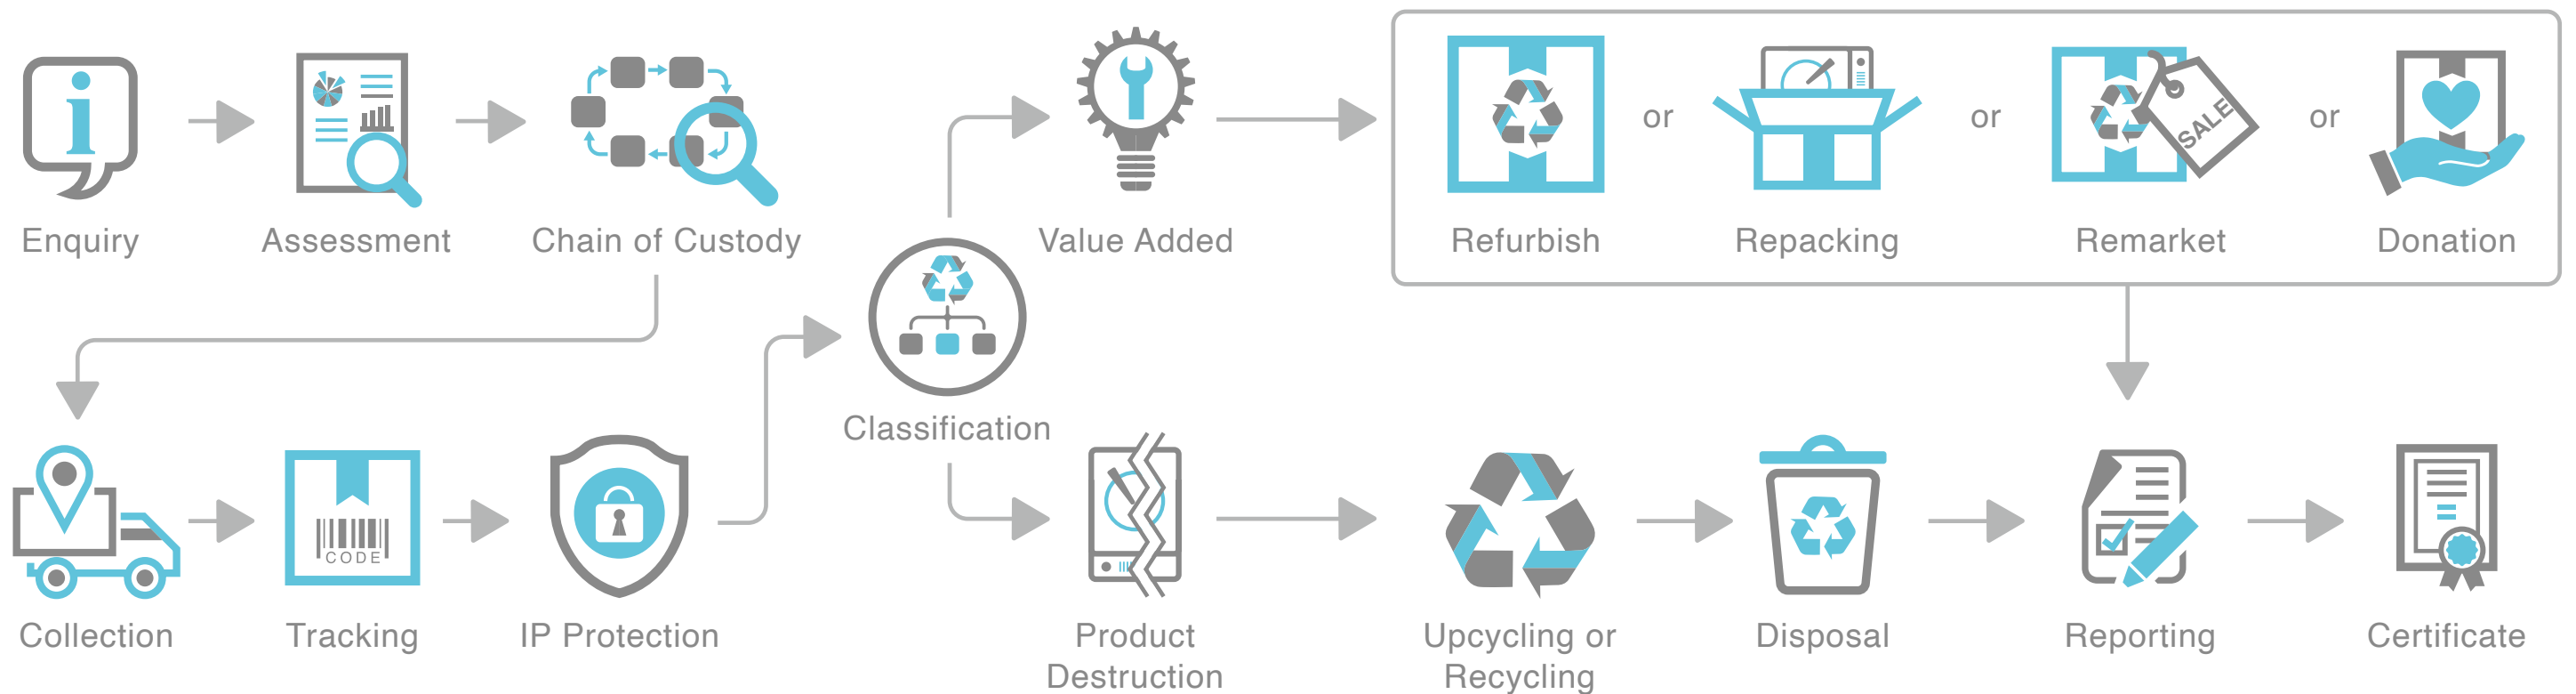

Reverse supply chain management is to collect returned products from consumers for reuse or disposal, to restore the value of products or correctly dispose of discarded products and reduce logistics costs. Combined with cost-effective return management and reverse logistics, customers can make use of recycled products and useful materials, which will greatly

reduce logistics costs and losses. Many large enterprises valued environmental protection as one of their corporate social responsibilities, and reverse supply chain solutions play an important role to improve the effectiveness of their business operations and their reputation to the public.

Our solutions include returns, recalls, repairs and refurbishments, repackaging, resales, recycling, destruction, and disposal, while adding sustainability and optimizing logistics process as basic elements of the reverse supply chain management. Over the years, our customers achieved long-term positive brand images and improved business growth,

while also reduced operating expenses including storage, logistics and processing costs. Therefore, the reverse supply chain has become a powerful tool for many companies to enhance their competitiveness.

► Solutions

► Waste Management Solutions

Waste management involves collecting, transporting, processing, recycling, auditing and monitoring generated wastes. EcoSage provides a variety of waste management and recycling solutions that suits your needs.

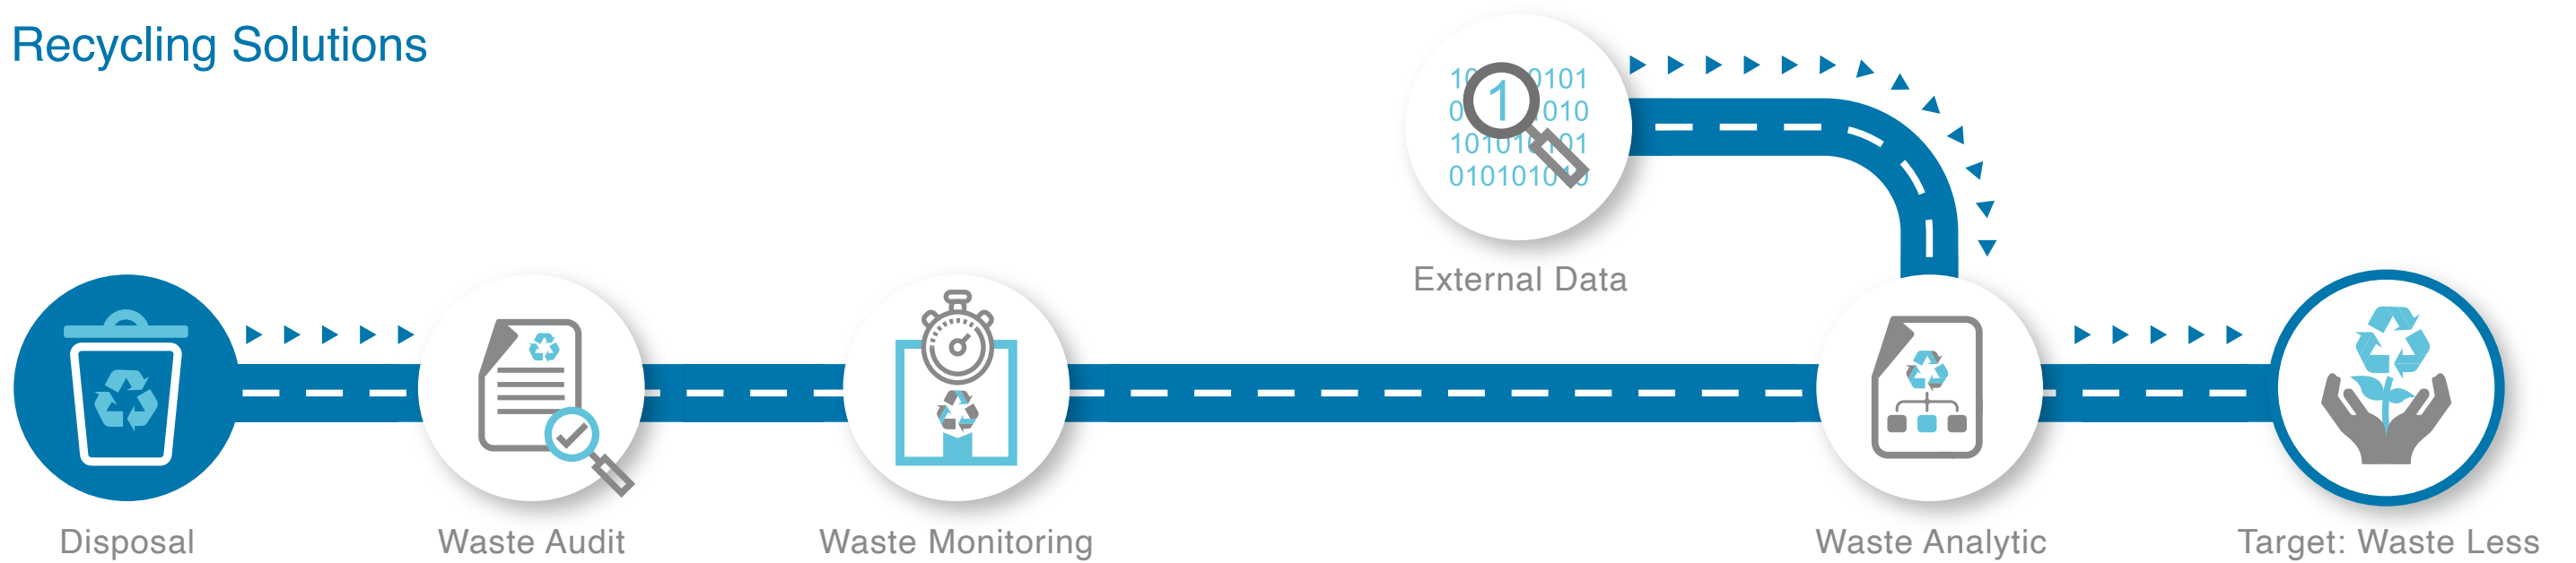

EcoSage has more than 15 years of waste management and recycling industry experience (with the registered trademark of RecycleE®), which is definitely your right choice. Our UK Chartered Waste Manager and data analysis

team use innovative solutions and work closely with various stakeholders in the industry, to help customers to achieve sustainable development goals, reduce generated waste and increase business profits.

Starting from assisting customers in disposing and analysing sources of wastes, we work with customers to design and develop various tailor-made solutions to meet the increasing demand for sustainable development. By planning a

Waste Reduction Roadmap together, customers have a better grasp of future waste reduction plans and goals.

► Recycling Solutions

EcoSage and its certified partners have served more than 500 commercial customers in the APAC region.
