# Automatic real-time data from different sensors?

**How to collect air quality parameters real-time?**

**Automatic sensor;  
But Manual process**

**Continuous measurement**

**Different sensor vendors, different application platforms**

**Difficult to acquire permanent installation site with power supply**

# Sampling – How frequently can you collect?

- When did the problem occur?
- For how long?
- How serious was it?

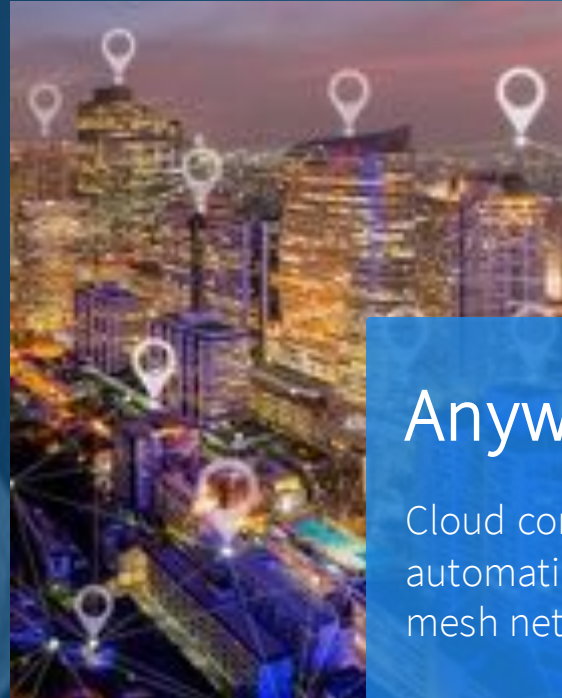

## Full Turnkey solution

Environmental monitoring application design, integration and deployment with operation & maintenance services

### Any Sensor

Open platform connects any digital sensor with serial port

### Anywhere

Cloud controlled automatic wireless mesh network

### Anyone

Auto calibration  
Configuration free  
No training needed

# Emission Gas Monitoring Station

Autonomous monitoring station running on solar power

Control panel with Synap wireless equipment and 4G modem

Dynamic gas sampling system with automatic zero gas calibration

# Emission Gas Monitoring Stations

# River Monitoring – Environmental Compliance

# Water Quality Monitoring Station

## Monitoring Parameters:

*\* Active water sampling system*

- Chemical Oxygen Demand
- Dissolved Oxygen
- Conductivity
- Turbidity
- pH
- Temperature
- Others

# Water Quality Monitoring Station

Control panel with Synap wireless equipment and 4G modem

Water sampling container with vacuum pump. Auxiliary clean water supply

Water sampling point at the bottom of the river

**Thank you**
